Across their journey from 10th standard to MBA, the students averaged 67.30% in SSC and 66.33% in HSC. Their degree average stayed almost unchanged at 66.37%. The entrance test was their strongest stage at 72.10%, while the MBA average was the lowest at 62.28%. Their salary mean (288,655.41) is above the median (265,000), suggesting a few high salaries pull the average up.

SSC: *Looking at the spread of SSC scores, the 25th percentile is 60.6. This means about one-quarter of students scored 60.6 or lower, while about three-quarters scored higher. The median is 67, so half the students scored at or below 67 and half scored at or above it. The 75th percentile is 75.7, meaning about three-quarters scored 75.7 or lower. At the upper end, the 99th percentile is 87, while the highest score is 89.4. The small 2.4-point gap suggests the very highest score is close to the 99th-percentile score.*

HSC: *The 25th percentile is 60.9, so about one-quarter of students scored 60.9 or lower. The median is 65, and the 75th percentile is 73, meaning about three-quarters scored 73 or lower. The 99th percentile is 91.86, close to the maximum of 97.7.*

Degree: *The 25th percentile is 61, the median is 66, and the 75th percentile is 72. This means the middle half of students' scores falls roughly between 61 and 72. The 99th percentile is 83.86, while the maximum is 91.*

Entrance test: *The 25th percentile is 60, the median is 71, and the 75th percentile is 83.5. The 99th percentile is 97, just one point below the maximum score of 98.*

MBA: *The 25th percentile is 57.945, the median is 62, and the 75th percentile is 66.255. The 99th percentile is 76.114, compared with the maximum of 77.89.*

Salary: *The 25th percentile is 240,000, the median is 265,000, and the 75th percentile is 300,000. So, the middle half of salaries lies between 240,000 and 300,000. the maximum salary is 940,000.*

Conclusion: *The mean shows the average, the median shows the middle value, and the mode shows the most frequent value. Together, they help summarize students' academic scores and salary distribution. The percentiles show how students' scores are spread from the 25th percentile to the highest values across their education, from SSC through MBA. Comparing these results with salary gives us a first look at how academic performance and salary vary in this dataset. However, this summary alone does not show that higher academic scores caused higher salaries.*
